

Instructions for setting up FTP-SSL with Cyberduck

Cyberduck is a modern, high-performance program for Windows and MAC platforms. Cyberduck was designed to be easy to use and free of charge. It also offers simultaneous support of as many useful features as possible.

» DOWNLOAD CYBERDUCK

Cyberduck is free of charge.
Licensed under the GPL.
Download at: www.cyberduck.io

- Download Cyberduck from the specified address.
- After installing, open the program.
- It should look approximately like the image on the right.
- Click on the „New connection“ button.

- Enter „data.robotmech.com“ in the Host text box.
- Select „FTP-SSL (Explicit-AUTH TLS)“ from the „Protocol“ drop down list.
- Please refer to the email you received after requesting FTP access for your user and password data.
- Click on the „Connect“ button and you will be connected to our FTP server.

- When connecting to our server for the first time, the program window will be empty.
- You can now transfer your data to our server via Drag&Drop, by dragging your files to the program window.
